June 1, 2001

Dear Dr. Prieler,

For more than 3 years, the Vienna Test System has been used at our education centers of Ingolstadt and Neckarsulm. To this day, around 6000 applicants have gone through the test battery process – and 1500 trainees have been chosen.

The 68 systems in the corresponding local network do not only function flawlessly, but they also contribute in a valuable way to the assessment and the selection of the trainees. The practical handling, the storage and the further use of the results in our data banks and those of our company and the formal adaptation of the test results have had a highly positive influence on the selection proceedings and greatly speeded them up.

The assistance provided by your company during the intensive preparations for this project has substantially contributed to a speedy installation and a short introductory phase. The excellent cooperation with the Psychology Department merits special notice. Thus important short-term economic effects could be reached in this area.

We would like to take this opportunity to thank Dr. Schuhfried GesmbH for the excellent and highly committed cooperation.

Sincerely,

AUDI AG
Education Department

Frank Richter
